

## Problem zone skylight domes: reliably tight with KEMPEROL

Stable, temperature-resistant, resilient - skylight domes have to be all of these things. To meet these standards, KEMPEROL offers custom-fit products for securely waterproofing skylight domes. KEMPEROL liquid plastic waterproofing provides long-term protection against moisture damage. Whether for pitched roofs, flat roofs or dome roofs - with KEMPEROL you are on the safe side.

### All-round solutions and quality

Our KEMPEROL products are a proven solution for sealing skylight domes, for example in sandwich panels. Often the first step is to **KEMPERTEC EP5-Primer** processed on metal roofs. Based on epoxy resin and also solvent-free, it can also be processed at ambient temperatures from 5°C up to 30°C and especially in weather-unstable transitional periods.

Depending on the area of application, either the application of the **KEMPEROL 2K-PUR** Waterproofing that is not only odourless and solvent-free, but also environmentally friendly - or **KEMPEROL AC Speed**, applied to the **KEMPEROL AC-Primer**, which can be of particular advantage due to its short curing time.
